Comments: Please describe how access and use of the starry goat bike trail will be maintained during this project. There are so few bike trails in the area, that loss of one is significant. Previous logging projects had a use impact on the trail, and it would be nice to minimize the impact during this project. It is also important to recognize that reducing overly thick unhealthy forests also eases trail maintenance, with fewer downed trees needing removed to maintain trail use, so overall, the long term improvement is welcome when it improves forest health in the trail areas. Opportunities in the treated areas to create new low-maintenance bike trails should be considered.
