Title:

Comments: I have followed the Telephone Gap proposal for a number of years. The alternative preferred by the professional staff of GMNF has consistently struck me as very reasonable. It is designed to allow lands which in previous generations were used for agricultural purposes to be integrated into GMNF's preferred alternative of enhancing wildlife habitat and providing a strong base in forest growth, potential economic harvest, and pleasing aesthetic. I believe those goals are well defined in Alternative B, which I continue to support.
