Comments: In light of our current climate change situation, I am appalled at the project proposal the Green Mountain National Forest has made for logging almost 12,000 acres at Telephone Gap! Perhaps it's because GMNF is basing the proposal on a plan that is grossly outdated and inconsistent with current research. That plan was completed in 2006!

It seems common knowledge now that old and mature forests take and store a significant amount, up to 30%, of carbon emissions that cause climate change. In 2022, President Biden signed an executive order directing the U.S. forest Service to protect mature and old growth forests to mitigate climate change! What is GMNF thinking? ANY cutting of Telephone Gap at this time is irresponsible and needs to be stopped before it's too late!
