Comments: I request that, in regard to the Telephone Gap Logging Project, the Green Mountain National Forest opt to DO NOTHING and not log this parcel of land. It would be better for the GMNF to wait and include this parcel in the general review that will take place in 2025. Once these 13,000 acres of trees are gone, they are gone for this century, as is any benefit of the carbon sink they've created. Let's wait a year or two for a comprehensive review of logging policy for our national forest before making any decisions about this. Thank you.
