Comments: The proposed recreation and motorized use under the revision plan in Mineral county will continue to severely impact our economy and way of life. The current maps indicate less access for the general public and a decline in motorized access. I support a diversified approach to our forest management including logging to reduce fire danger and avoiding costly out of control wildfires. These fires negatively effect our economy and tourism along with that they are extremely costly.

I do not support long term proposed wilderness study areas as this allows the USFS to act in place of congress essentially creating wilderness areas without legislative action.
