First name: Dan
Last name: Nicol
Organization: GR
Title: Engineer
Comments: Any project that restores and maintains safe travel and needed access on the National Forest is supported by adjacent landowners/neighbors. Timely restoration and continued access needs exist from summer to summer as the risk of fire only dwindles during the winter months. Access roads are needed for future fire threats and timely suppression efforts. There should be no excuse for fire growth because a road through a previous fire scar is deemed "too unsafe" for suppression needs.
