Comments: Thank you for including me in the dissemination of this information. I do not know if this is the correct way to submit my comments, hopefully you can pass them along to the proper people. I believe that all of the forests in VT should be managed in ways that will best ensure the health of the forest, harvest the trees that will bring in revenue that can benefit the State coffers and the logging/firewood industries and provide the best possible habitat for fish and both game and non game wildlife. Public use, such as camping, wildfire prevention and control must also be considered. Extreameism and greed should not have a seat at the table. I also do not think that not harvesting trees just for the sake of creating a "forever wild" forest is a good idea. Reason and not emotion need to dictate action.
