Comments: As a facility, we are in favor of reducing fuel surrounding our community and look forward to working along side the Forest Service. Looking at the maps and seeing the locations for prescribed burns near the YMCA facility planned for winter 2024, I have two comments. 1) If there is thought of accessing these sites through YMCA property, the roads to get to these areas during the winter are not accessible and are closed to motorized vehicles. These roads are used as ski trails and have a lot of use during the winter as early as October depending on the year as this is higher elevation. 2) Signage for the local community would be great as we see guests from other states and countries during the winter. Seeing other prescribed burns in the area, we know this is easily attainable and would like to have advance notice to alert guests as these burn areas abut our property.
