Comments: To Whom it May Concern,
I am strongly against any actions that involve burning, including controlled burns, and burning of downed wooden materials.
Considering the track record for controlled burns in the state of New Mexico where they have been carried out under windy weather conditions and have caused the creation of at least 2 huge forest fires, there is no longer any trust that the burning will be safely controlled.
I live near the area for this project.
Please DO NOT do any burning.
Thank you for your time,
