Comments: I am in favor of the project

road 14435 (prospect creek road) is my travel road in an out of my property. I have gone to great personal effort to maintain the road in a good travel condition. Logging activity can disturb a road surface and ditches. Please have it restored to at minimum the condition you found it when the project starts.

spray for weeds along roads used in the project. disturbed surfaces can promote weed growth. This is true not only for the main roads shown on the map but also main skid and access roads. Along major roads, spray at least 15 feet from the pavement edge (not just a 3 foot strip) The skid roads could be treated also or they turn into swaths of thistles, Mullein, and other noxious weed that can spread to private property like mine adjacent to the sale areas.

Try to minimize the access and travel paths onto sale area property. The use of ATV, side by side 4X4, and pickup trucks can disturb the ground and often is obnoxious
