Title:

Comments: There is significant competition for parking space, safe and maintained access roads, and usable riding area for public motorized land users. Adding a significant non-motorized user burden to these already limited areas of public land will push out motorized users and discourage access to public lands for all. Please do not allow this use in a motorized area and instead redirect it to an area where motorized use is not allowed so that the burden of user competition isn't focused on the few available motorized use areas. Thank you.
