Comments: I've lived at my residence for over 20 years. if the proposed project goes through and the steep terrain behind my house gets clearcut. It will cause mudslides and the amount of water coming out of the Holler behind my house will increase tremendously.. i'm worried about it doing property damage to my house and my farm. my house is located probably 50 feet from the property line to the Daniel Boone national Forest and a creek runs right behind it so torrential water and mudslides would really do damage to my residence.
