Comments: I live at [PII Redacted] in Placitas. I been diagnosed and suffer from bad asthma. I struggle to breathe already on a daily basis. I have deep concerns about this project. While I understand and agree that the reduction of wood is essential to reducing fire risks, I believe that more harm will come from this fire with the smoke contamination and inhalation hazards as well as risk of uncontrolled fire burning our homes. I urge you to consider alternative solutions such as chopping and removing the wood. Solutions that don't run the risk of poisons in the air or fire burning our homes would be much more viable. I wanted to hear and express an opinion at the Placitas Library this evening, but it was overwhelmed with people who felt the same way that I did. In addition, there was not enough room for everyone, and the audio/video system malfunctioned. Thank you.
