Comments: Please do not do a "controlled" burn in Las Huertas Canyon.
You run a serious risk of damaging the watershed which supplies the Village of Placitas, at the very least. At the worst, you could ignite a fire which could spread to homes in the Placitas area.
I assume there have not been funds to thin the area along the road, and know that there is great damage from beetle kill in the Sandias. But given the cost to settle claims in the Calf Canyon fire, it would seem that funds could be found to hand thin and remove the debris rather than making burn piles. Please listen to the community.
