Comments: I strongly support the restoration efforts in the Gold Creek area. Improving the habitat is crucial to the wildlife which depend on the intact and connected ecosystem. Restoring the creek and pond will improve the aquatic ecosystem and the entire hydrologic system. These are of course essential for endangered fish and other wildlife inhabiting the area. I support limiting and managing human recreation to reduce the negative impacts on wildlife. Outreach to the public will be necessary to develop an understanding and appreciation for the restoration efforts and to best understand how to minimize their impacts on the local ecosystem and wildlife.
