Comments: I have not seen evidence that logging lessens the danger of wildfires.
What I have seen, living 9 + miles Twisp river for 17 years, is that we have more and more weeds as a result of road cut for the purpose of logging. This has encouraged people with all-terrain 4-wheelers to increase their range, also spreading weeds further.
Respectfully, I trust you will be using good science to manage the forest in the Twisp river. There are no quick solutions, and the forest needs time to recover, not necessarily with logging as done in the Loup Loup area.
