Comments: The concern I have is the road from Colorado River Road to the lake. It is narrow in parts and with the normal traffic we have now the road is poor. The Eagle county portion of the road is dirt with mag chloride and is in poor condition most of the year. Is eagle county or NFS going to improve the road? The snow and rain cause the road to develop pot holes and those who live on the road are the ones who deal with these poor conditions and with increased traffic the road will only be in much poorer condition all year. The second issue is the width of the road at some points along with blind corners and driveway entrances. While the road is wide enough for passing vehicles there are other areas that do not allow for the two vehicles to pass and one can need to stop, going down into Jackson's Hole is one such point. Blind corners are also issues as you need to know which corner to stay to the right.
