Comments: I have concerns about lead fishing weights disproportionately impacting wildlife in the BWCA as a national forrest and waterfowl sanctuary and breeding ground.

I have concerns about barbed fishing hooks disproportionately impacting fish species in the BWCA as a national forrest because individuals have to pack light they may not bring appropriate fish hook removal devices leading to greater fish kill due to 'foul hooks'.

I have concerns about live bait disproportionately impacting the unique environment of the BWCA as a national forrest. For example, earthworms are not a native species and are used frequently as live bait.
