Comments: Jellico Vegetation Management Project #63037

I am strongly in favor of Alternative #1 which would allow for a more rational approach to the harvesting of National Forest timber than the original clearcut plan. It is hard for me to see how the Forest Service can justify wholesale clearcutting of this land, an action that appears to be shortsighted and potentially environmentally disastrous to the area. I have been through this area for many years and always admired the natural beauty of the area, something we can't afford to be cavalier with in the future just to provide a small income for the Forest Service.
