Comments: Thank you for the opportunity to comment on this project. I am a longtime user of the Daniel Boone national Forest for camping and hiking and solitude and spiritual retreat and canoeing and nature study. The forest service has failed to adequately. Consider the impacts of climate change on the forest and how these activities will affect that through the multi decades, long project. it has also failed to consider the fault impacts of the so-called vegetation management on endemic and threatened species. The project impacts extremely rare mature in old growth Forest habitat in the region and skewed towards creating openings and Edge habitat that is implantable supplier across the region.
