Comments: How has the Forest Service gotten this so wrong?! What planet do they think they're living on? Here on planet Earth, we are cooking in excess carbon & desperate to expand the tree canopy that can help save us. Maintaining old-growth forests like Daniel Boone is essential to our survival. The Jellico plan to log the forest is not only absurd, it's suicidal.

No option in this plan is acceptable.

Please, for heaven's sake, for Earth's sake, stop this insanity. Cancel the Jellico plan in its entirety. And insist that Forest Service personnel learn some basic environmental science.
