Comments: Skyline Assayers & Laboratories has supplied its assaying services to the mining sector since its founding to serve the Copper Queen mine in Bisbee in the 1880's. Skyline supports the mining industry across all western US states, Mexico and beyond. If western civilization is genuinely committed to 'electrification', then it needs to recognize that can only happen if the raw materials for electrification are available. The South 32 project will not only have a positive impact on helping attain the electrification goals currently set, it will also be a boon to the businesses and people living and working in the region. Mining today is one of the most highly regulated & monitored industries in the world. South 32 has clearly demonstrated its ability to safely develop and operate the Hermosa project for decades to come. Skyline is happy to go on record in support of South 32's Hermosa project.
