Title:

Comments: 1. I have some concerns regarding the Access road from the Harshaw Bridge, as well as how to include a corrected access road to Red Rock Canyon Road. Due to the "New" access road, this of course changes my ability to access my property which has the current Harshaw Bridge on it. I would like to suggest a Round about for this endeavor, this was it will slow traffic, allow me to have the Red Rock Canyon Road access next to the Red Rock Estate road access.

2. My Home is at 48 Harshaw Rd. Due to the Geologic features of my property I am assaulted by the noise of the trucks that travel by my home now as the sound is trapped in the canyon and just reverberates. In anticipation of having a non stop parade of semi trucks hauling ore by my home, I would like to know how my situation can be improved, for instance sound barriers.... I also deal with the Trucks driving too fast on Harshaw Road by my house.

3. With regards to the discharge of water in Harshaw Creek, my property is on both sides of the Harshaw road and the Harshaw Creek runs through my property, I would like to know if the Mine is willing to assist in Creek Remediation to prepare for this flow. This would assist in having the creek better suited for year round water flow and prepared for seasonal flooding.

4. As this area is "Open Range" and the Wildlife corridor that flows through my property, I am concerned on a daily basis about the safety of not only my livestock, but also the wildlife that come through my property to access Sonoita creek areas. I have been concerned about when I need to move my herd from one side of Harshaw Road to the other pastures, I have had many occasions where the trucks come very close to hitting my animals. Please feel free to contact me .
