Comments: Jellico Vegetation Management Project

I support alternative compromise #1 and am greatly opposed to the original proposal of logging the 10,000 acres. Drive up road 779 (Browns Creek) and look at the mess left by clear cutting. It has contributed to the demise of wild turkey and deer populations in the area. We have lived here since 1994 and the wildlife has drastically decreased after the logging. The areas are now so overgrown from the clear cutting and tree tops left scattered that they are unusable. Not only the wildlife decrease but natural areas in general with the ever increasing population and expansion of people and civilization are decreasing. Farms turned into subdivisions or strip malls. Our natural environment has to be preserved for future generations.
