Title:

Comments: For years we have been watching the state of Ky become more tropical. There is no denying climate change and the warming of our home-this planet. We need every tree already living in our state and millions more. Instead there is a desire to cut thousands of acres of trees.

No, do not try to justify clear cutting.

There are old oak trees, flowers and plants here that cannot be replaced.

Stop the cutting now. When are you going to admit that we need nature? Nature doesn't need us.
