Title:

Comments: Please do not do this project. The long-term effects would be devastating with climate change. Kentucky has already seen what happens with flooding when you take away our trees. We depend on our eco system for our own survival for multiple reasons. Please think about the people of Kentucky who deserve to live, and deserve to be healthy while living. Think about the millions of dollars spent and all of the people still displaced by our last flood. Do we want that on an even greater level?
