Comments: My concern regarding the impact of the wildlife in the area. I have noticed less wildlife traffic around my community specifically around my neighborhood. My home had a "Javelina Highway" running between my home and my neighbors, and there has been less traffic. The same with Mule Deer that traveled across my property and the ravines behind my property. Also a decreased spotting of roadrunners .

How will the water being removed and put back in impact not only increased/decreased Vegetation but the water table shifting? Causing the natural flow of rivers to possibly to be redirected and decreasing wildlife, game and fish to be shifted or diminished? What is the recommended safe distance of a Maganese processing plant to local communities health considered safe?
