Title:

Comments: I fully support the project because of the significant economic development benefits. Like with all projects like this one that will impact the environment, I consider it is crucial to establish clear metrics for monitoring environmental impact with a clear timeframe of measures so that any corrective and preventive actions are taken immediately. Recycled water quality should be on top of the list because if water treatment is handled properly, the impact of this project to water resources can be minimized. Any infrastructure improvements that support recreational activities should be considered. For example, if a road is built and on the side of the road it is possible to build parking areas with picnic tables and trailheads it will be a plus so that we have more options to do outdoor activities.
