Comments: I am writing to oppose the Jellico Project as described. I am concerned this project does not adequately address the current and future issues in the area with invasive vegetation. I am also concerned about adverse effects to multiple endangered species in the area, especially fish and mussels at high risk from stream sedimentation following logging. I would prefer that forest regeneration occur as a result of controlled burns, natural events, and smaller scale cutting of trees in targeted areas. Alternative 1 would be more acceptable if commercial harvest must occur.
