Comments: I do not agree with this at all. In my opinion I feel this will do more harm than good. The beauty of the mountains in this area are unmatched. Peoe come from other states just to admire them. Also, I feel this will displace wildlife in this area, and not only that but will cause disruption in the echo system of the river that will be catching the run off from erotion and run off from the pesticides that will ultimately run into the river. Not only the echo system of the river but will also affect the drinking water of people who are supplied water for that same river. This is a dangerous project that just doesn't need to happen.
