Comments: I'm writing about the proposed massive cutting in the Jellico region. I'm a taxpayer, concerned about this 10,000 acre project with a 40 year plan, that does not protect mature forests. President Biden's directive is to preserve mature forests. During a climate emergency, why are logging quotas the main concern?

I understand we need timber, but at this time we need to take care of our forests and the species who depend in them, including humans.

I am against this plan's scope, defiance of the executive order to preserve old growth, and 40 rather than 10 year plan.
