Comments: As a teacher and environmental educator, I have taken my students many times to Pine Mt. School and Land Between the Lakes Environmental Center to spend a week studying and experiencing the environment. I also lead hikes and backpack trips in Daniel Boone NF.

Consequently, I cannot agree with some of the extreme proposals in the Jellico Vegetation Management Plan. In particular, the aspects of clear cutting and resulting habitat destruction. So many life forms in an ecological cycle would be adversely affected by such destructive practices that result in the elimination of supportive natural green spaces.
