Comments: We should not log old growth forest. The trees are the anchor to a biome that is not replaceable on in our lifetimes. When the Amazon is deforested, the US calls foul. Why would we allow this in our own country.?

There are almost no old growth forest areas left, because we have allowed policies like this. Don't prioritize short term financial gain over healthy ecosystems and biodiversity. Wild areas have more value when they are left to thrive. Why not develop tourism instead?
