Last name: duchnowski

Organization:

Title:

Comments: This project should not be allowed. The most precious and limited resource we have in Arizona is water and this project will both waste water and will pollute our water supplies. The minerals that would be extracted from this project and the minimal economic benefit is completely insignificant compared to the most important water supply that will be needed for it and the damage that it will cause to our environment and water sources. This project should not be approved under any conditions.
