Comments: Please reconsider the Forestry Plan to start a massive timber harvesting plan in the Jelico Vegetation Management Plan. From removing old growth forests, using timber harvest goals, altering the forest floor making landslides and erosion more possible than ever. This idea of a 40 yr plan also seems absurd. With the lack of proper planning, oversight, and enforcement of current law or future bad proposals(like this one) there will not be much left to manage anymore. Geeze not to say anything about water, water downstream, cooling effects from tree cover, carbon sequestration, Destruction of the forest ground floor ecosystems, The list can go on. What is the purpose of all this? It all can't be money, it is to ruin the land around us? Denude everything so we move on to lesser places? Pease reconsider you plans.
