Comments: Regeneration cuts, such as clearcuts and shelterwood logging, in mature and old-growth forests has no place in the Jellico Mountains. These practices pose a significant threat to the crucial role mature and old growth forests play in mitigating climate change, as emphasized in President Biden's Executive Order.

The best available climate science unequivocally demonstrates the importance of mature and old-growth forests for climate change mitigation. These forests act as essential carbon sinks, helping to absorb and store significant amounts of carbon dioxide from the atmosphere. By acknowledging this science, the USFS should align its practices with broader conservation objectives and contribute meaningfully to climate action efforts.

US President Biden's Executive Order aimed at preserving mature and old-growth forests. The proposed plan doesn't do that.
