Comments: I fully understand that logging is a way of life for many . I also understand that some are fully against any logging. But I think we can find middle ground to satisfy both sides. I'm not anti NFS

I have several friends and family who work or have worked for the agency and we've always had a good relationship and I don't want to see that end. But I'm convinced that not all the 10,000 acres needs to be logged nor do I think a large portion needs be clear cut. Let's work together and find a middle ground that both sides can work with . Let's set the example for others across the country to see and know that common citizens and the government can work together for the common good. Thank you for allowing me to have a voice and look forward to working together in the future.
