Title:

Comments: I am writing to oppose both alternatives which include extensive logging of old growth forests which, now as in the past, brings invasive species with the projects, and destroys irreplaceable habitat using the false cover of needing to produce early successional habitat, though this type of habitat is widespread on private lands. We don't need more clearcuts. Most of the state is already clear. The job of the forest service should be to protect the forest it manages. healthy mature forest is rare and precious.
