Comments: I am completely against South 32 Hermosa mine. Mines are notorious for water contamination, air pollution, hazardous waste, hazardous processing, etc. This mine is mostly aimed to provide ore for batteries for Electric Vehicles. Ford and Chevrolet are taking huge losses on EVs because nobody is stupid enough to buy EVs. EVs are definitely not practical and they are exceedingly costly in all ways. Not to mention EVs spew harmful contaminants into the air, much worse than a gas powered vehicle. So how will South 32 make money if no one is buying EVs? Will South 32 sell the ore to other countries while ruining Arizona? Global warming is a lie so the "elites" can capitalize on their investments such as EVs. Gas powered vehicles have so much EPA regulation on them, how can they possibly make the environment worse? I am completely against South 32 Hermosa mine also because of the huge amount of water it will use. Santa Cruz County has limited water and the chance the water will be contaminated from the mine is only a matter of when. Also South 32 truck traffic will have a bad impact in Santa Cruz County. And what about the ore processing center? There will be too much contamination from South 32. Nothing about South 32 Hermosa mine will help Santa Cruz County or the environment. I am completely against it.
