Comments: I'm deeply concerned about effects of the mining industry in general. I've read, listened, and done my best to seek out studies that have shown both sides of the argument. I'm concerned about Patagonia because the mining profiteers historically

DO NOT care about our environment and communities and WILL leave once they get their billions and leave us with decades of toxic pollution and chemicals destroying our environment.

This is a fact and our community will never be the same again.

I'm hoping for a better future for our children and I'm not sure that the long term effects of the mine will be in their best interests.
