Title:

Comments: My name is Arlin Munro,

I appreciate the opportunity to give input to this process.

I am concerned about the following impacts of this project in the area.

1. The effects the project will have on the amount of water being used from the ground water table
2. The effects on the quality of water to the water table, including contamination from Manganese and PFAS in any step of the processing
3. Effects on traffic and recreation in the surrounding area
4. Effects of toxicity from Manganese exposure to workers, local area residents, wildlife, etc
5. Direct effects on wildlife and plant life from soil contamination of any kind as well as from air and water contamination or destruction from construction and excavation practices
6. Any effects on the watershed and or the size of the aquifer, or areas served by these.
7. Any effects on long term health to people in the area
8. effects on air quality in the area
