Comments: I have several comments and things i would like to be studied.

Firstly, I would like the effects on water quantity from the pumping that south32 has requested to do. There is a possibility that the aquifers wouldn't be properly replenished and that the supply of our drinking water would be significantly decreased. Secondly, the proposed powerline runs very close to the Calabasas mission, and I wonder whether that counts as a sacred archeological site and the powerline would disturb the sacred site. Third, please research how the traffic will change and affect the road conditions due to increased traffic from trucks coming from the proposed site. Please take these things into consideration when drafting the EIS.
