Comments: Please keep Sweetwater lake unpopulated and as primitive as possible. It should also be maintained as a "fishing first" lake to minimize the amount of paddleboarders and other users who overrun many other State Parks regularly. Electric only motors should be required at this lake. First come/first serve should be the way the campgrounds are used. The reservation system currently used by CPW is broken and rewards people who have unlimited funds and denies use to those who live in the region. The bird life at this lake is incredible and the disturbance to them should be minimized and should also be a very high priority. Please do not make this place yet another example of a place that will be overrun by the general public especially those from population centers from the front range. There are too many of those already. This place is special and needs to be protected.
