Comments: I am glad you are looking into the South 32 mine impacts and considering our concerns.

Please study how to require the air quality be monitored and updated daily.

Please study the effects on the wildlife population in the surround areas near the mine.

I feel we cannot lose all the water which will be pumped from the ground, so please study the effects this will have on all of us, including the land, animals, birds, and our ecosystem.

Please study the long term effects of experimenting with cement past to prop up the ground after it has been disturbed.

I live downstream from the project and I feel our home and many others will be affected badly.

Thank you.
