Title:

Comments: I have several concerns:

1. The toxicity of the "cement paste: backfill and the impact on the water quality. Please study this.
2. The placement of the stack tailings - what will be the impact on the current wildlife habitats of this proposed "placement" location? Please study this.
3. The "primary access road" impact on the ecosystem and all of the wildlife habitat - will this negatively impact older growth oak trees, etc? Please study this.
4. What is the potential toxicity of "acid generating waste rock" on the environment both in ground and below ground? Please study this including any impact on the air quality and potential negative impact on people's health.

Thank you for your efforts to safeguard and protect our environment.
