Comments: Arizona is facing the most serious crisis in water shortage in years.

The environmental impact caused by the increased use of water by a mining company by doing more dewatering is harmful to the National Forest land as well as the local residents, animals and plants.

Please study in great detail the impacts the Hermosa Project will have on the area's (and beyond this area's) water resources, including drying up wells, causing land subsidence, drying up springs, drying up the plant life, and forcing animals, birds & insects to leave the area. Thanks.
