Title:

Comments: Please preserve our last standing old growth forests!!! They are essential for oxygen on the earth, for countering climate change, for wildlife to exist, to help endangered species continue to live, and to preserve them for our child and generations to come. Shame on anyone who destroys these beautiful and irreplaceable places on our earth.

Humans have advanced machinery all over the world that is rapidly destroying forests and rainforests for profit. It is truly frightening. We will all suffer from this tragic calamity if we don't stop the few greedy humans that profit, while the rest of us suffer from it, and they will too, in the near future if they succeed. Save our old growth forests!!!
