Comments: The Biden Administration implemented an Executive Order to better protect what little older forest remains. This is being usurped by Timber Industry- backed pseudo science claiming that cutting forest will prevent wildfire.

Yet, the science not funded by the Timber Industry concludes that logging increases both the likelihood and the severity of forest fires. Meanwhile, logging also releases great amounts of CO2 into the atmosphere, thus exacerbating the very cause of increased wildfires: Climate Change.

We need to protect all old growth and mature legacy forests and this can be achieved by prohibiting any further removal of these valuable forest stands. Please stop serving the Timber Industry and start serving the people.
