Title:

Comments: I am strongly in favor of this trail system becoming a reality and coming to fruition. Aside from the health and wellness benefits associated with the physical activity of mountain biking, I am strongly opinion that the long-term economic viability of our community rests on this trail system. The economic impact of this would be so significant that it would restore community sustaining economic activity to a community that has suffered from population decline for many years. This would stop that decline by providing economic stimulation and the resulting jobs. We as a community need this trail system for the health/wellness and the economic impact. The citizens of Mena Arkansas overwhelmingly want this trail system to happen.
