Comments: Old growth trees carry knowledge that carries to other trees in the forest for survival. Old growth trees are exceptional living souls who have seen hundreds of years of survival through everything until a human comes and takes its life for greed. I have not been able to travel much yet but my dreams are to hike in these wondrous old growth forests who are the homes to so many along with purifying our air, they are natural air-conditioners which we really need now with this Climate Crisis. Please protect them for every American and future generations.
